

Bithor SC

Imidacloprid + Bifenthrin

- Neonicotinoid insecticide.
- Acts on the nervous system by blocking an important neurotransmitter, resulting in insect paralysis and death.
- Effective on contact and ingestion.
- High level of efficacy against important turf and ornamental pests.
- Systemic mode of action allows Imidacloprid to be translocated throughout the plant via xylem tissue.
- Second generation synthetic pyrethroid.
- Binds to and triggers the insect's sodium receptors resulting in paralysis.
- Effective on contact and ingestion.
- Does not contain an alpha-cyano structure which is associated with skin and throat irritation.
- Effective against disease transmitting mosquitoes.
- Longest known residual in soil of currently available products.

Inside, Perimeter, Outside, Turf & Ornamental

With its wide range of use sites and powerful combination of active ingredients, it makes sense to make BITHOR your go-to product for use in all situations and against all pests. Take care of household, turf and ornamental pests, all at one time, with one product.
